## Join the NAWAPA Blog!

<http://www.larouchepac.com/nawapablog>

We invite engineers, scientists, and others to participate in a new online discussion group on how best to implement the 1964 North American Water and Power Alliance design for today.

The purpose of the blog, according to Michael Kirsch, NAWAPA Plan Coordinator at LaRouche Pac, is to **refine, elaborate, and assemble** the various aspects and designs for NAWAPA and its implications, into a more rigorous economic recovery plan, which will serve as a rallying point for the thousands of other skilled labor, engineers, and scientists of this country, and with which State elected officials can build support for the plan.

Among the already posted items:

\* Nuclear engineer Dewitt Moss's proposal for **nuclear plants to power the Sawtooth Lift** section of NAWAPA. Moss, a veteran of the Fast Flux Test Facility (FFTF) in Hanford, Wash., discusses three nuclear plant designs, the PRISM (Power Reactor Innovative Small Module), the IFR (Integral Fast Reactor), and the LMFBR (Liquid Metal Fast Breeder Reactor). <http://larouchepac.com/node/17558>

\* Industrial engineer Terry Bates, writing on the mind-boggling **challenge of pumping** required at the Sawtooth Lift.

\* A discussion of **tunnel creation** for NAWAPA by New Mexico engineer/construction consultant Thomas C. Taylor.  
<http://larouchepac.com/node/17641>

\* Engineering our Southwest Biosphere: The implications of NAWAPA for **reversing the desertification** and water shortages of the

American Southwest by Michael Kirsch  
<http://larouhepac.com/node/17652>

### **A Cornerstone for Recovery**

In his invitation to scientists and engineers, Kirsch explained that the “proposals discussed on the forum will serve as the basis for an organization of the industries, labor force, and scientific planners of the United States and elsewhere to form a ready-to-implement document, and reference point for a science driver approach. This implementation and design program is to serve as the cornerstone of a general economic recovery, and every aspect of that recovery is discussed here.”
